Abstract

This language table is adopted from the KRNIC Korean IDN Language table (ko-KR: http://www.iana.org/domains/idn-tables/tables/kr_ko-kr_1.0.html) for the implementation of Korean IDN registrations at the .ASIA gTLD.

DotAsia is committed to maintaining the integrity of .ASIA IDN registrations and understands the multilingual nature of the .ASIA zone as a gTLD. In preparation of this language table, DotAsia has coordinated with KISA (Korea Internet & Security Agency) on the applicability of the KRNIC Korean IDN Language table for the .ASIA gTLD.

The following table includes 11,172 Hangeul Syllables (along with the 36 LDH characters, "a-z", "0-9" and "-") according to the consensus of Korean Internet community. Hanja characters are not included in the table. Mixture of Hanja characters with Hangeul characters for domain names is not encouraged. Registrants interested in registering domain names with Hanja characters only may consider utilizing a registration based on the ZH table.

The following table uses the RFC3743-defined format, and is in compliance with the ICANN Guidelines for IDN registration and for publication in the IANA Repository of IDN Practices.
